Assignment: Project 2 Phase 2 Pseudocode

*/

/*

- 1) Parse the input, making it all CAPITAL
- 2) Loop through the data file line by line
- 3) For each line, split it on spaces
- 4) Check if the beforestring matches the input
 - a) If it does, print the afterstring (pronunciation)
 - b) Store the afterstring (we'll call it PRONOUNCE)
 - c) Loop through the file again, splitting each line on spaces
 - d) Check to see if the afterstring matches PRONOUNCE
 - If it does, print the beforestring (it's an identically pronounced word)
- 5) If you reach the end of the file and there's been no matches, print "Not found"
